

FEATURES

- Universal 85 - 305VAC or 120 - 430VDC Input voltage
- Output voltage adjustable
- Wide operating temperature range: -40°C to +100°C Base plate
- Input under-voltage protection, output over-voltage/short circuit/over-current protection, over-temperature protection
- Active PFC, PFC value up to 0.98
- Integrated parallel current sharing, status indication, remote control, auxiliary power supply, remote compensation function.
- High I/O isolation test voltage up to 3000VAC
- Operating up to 5000m altitude
- 5 years warranty
- Safety according to IEC/UL/EN 62368, GB4943

LBF1000-13B28-NS is one of Mornsun's potting ultra-thin bricks AC-DC switching power supply, it is suitable for industrial and outdoor occasions where the application environment is relatively harsh. It features universal AC input and at the same time accepts DC input voltage, cost-effective, high efficiency, high reliability and double or reinforced insulation. These converters offer excellent EMC performance and meet IEC/UL/EN 62368, GB4943 standards and they are widely used in areas of industrial, LED, street light control, electricity, security, telecommunications, smart home, etc.

Selection Guide

Certification	Part No.	Rated Output Power (W)*	Nominal Output Voltage and Current (Vo/Io)	Output Voltage Adjustable Range (V)	Efficiency at 230VAC (%) Typ.*	Room Temperature Max. Capacitive Load (μF)	Low Temperature Max. Capacitive Load (μF)
CE (Pending)	LBF1000-13B28-NS	1008	28V/36A	14.0 - 33.6	91.5	5000	5000

Note: 1.*Under any conditions, the total power of the product should not exceed the rated output power, and the output current should not exceed the rated output current;

2.*Due to different working modes, the efficiency difference between 0.5% and 0.7% is normal.

Input Specifications

Item	Operating Conditions		Min.	Typ.	Max.	Unit
Input Voltage Range	AC input		85	--	305	VAC
	DC input		120	--	430	VDC
Input Voltage Frequency			47	--	63	Hz
Input Current	115VAC		--	--	10.8	A
	230VAC		--	--	5.3	
Inrush Current	Built-in inrush current suppression circuit, external 10Ω resistor	115VAC	Cold start	--	20	23
		230VAC		--	40	46
Input Under-voltage Protection	Protection start		50	--	75	VAC
	Protection release		75	--	85	
Leakage Current	277VAC		<0.75 mA			
Power Factor	115VAC	Normal temperature, full load	PF ≥ 0.98			
	230VAC		PF ≥ 0.96			
Total Harmonic Ratio Of Input Current (THD)	Normal temperature, full load		≤10%			
Hot Plug			Unavailable			

Output Specifications*

Item	Operating Conditions		Min.	Typ.	Max.	Unit
Output Voltage Accuracy*	Full load range		--	--	±2	%
Line Regulation	Rated load		--	--	±1	
Load Regulation	0% - 100% load		--	--	±2	
Ripple & Noise*	25°C, 20MHz bandwidth (peak-to-peak value)		--	--	150	mV
Hold-up Time	115/230VAC (output voltage 28V, main bus with external electrolytic capacitor, >=1500uF)		20	30	--	ms
			20	30	--	
Output Over Voltage Protection			Vo≤40.6VDC (hiccup, clamp or shutdown)			
Short Circuit Protection	Recover time <5s after the short circuit disappear		Hiccup, continuous, self-recover			
Over-current Protection	Output voltage 14VDC-19VDC, output hiccup and constant current protection		42	--	47	A
	Output voltage 19VDC-25VDC, output constant current protection		42	--	47

Product Characteristic Curve

Note: This product is suitable for applications using in good conduction heat dissipation condition, for applications in closed environment please consult Mornsun FAE.

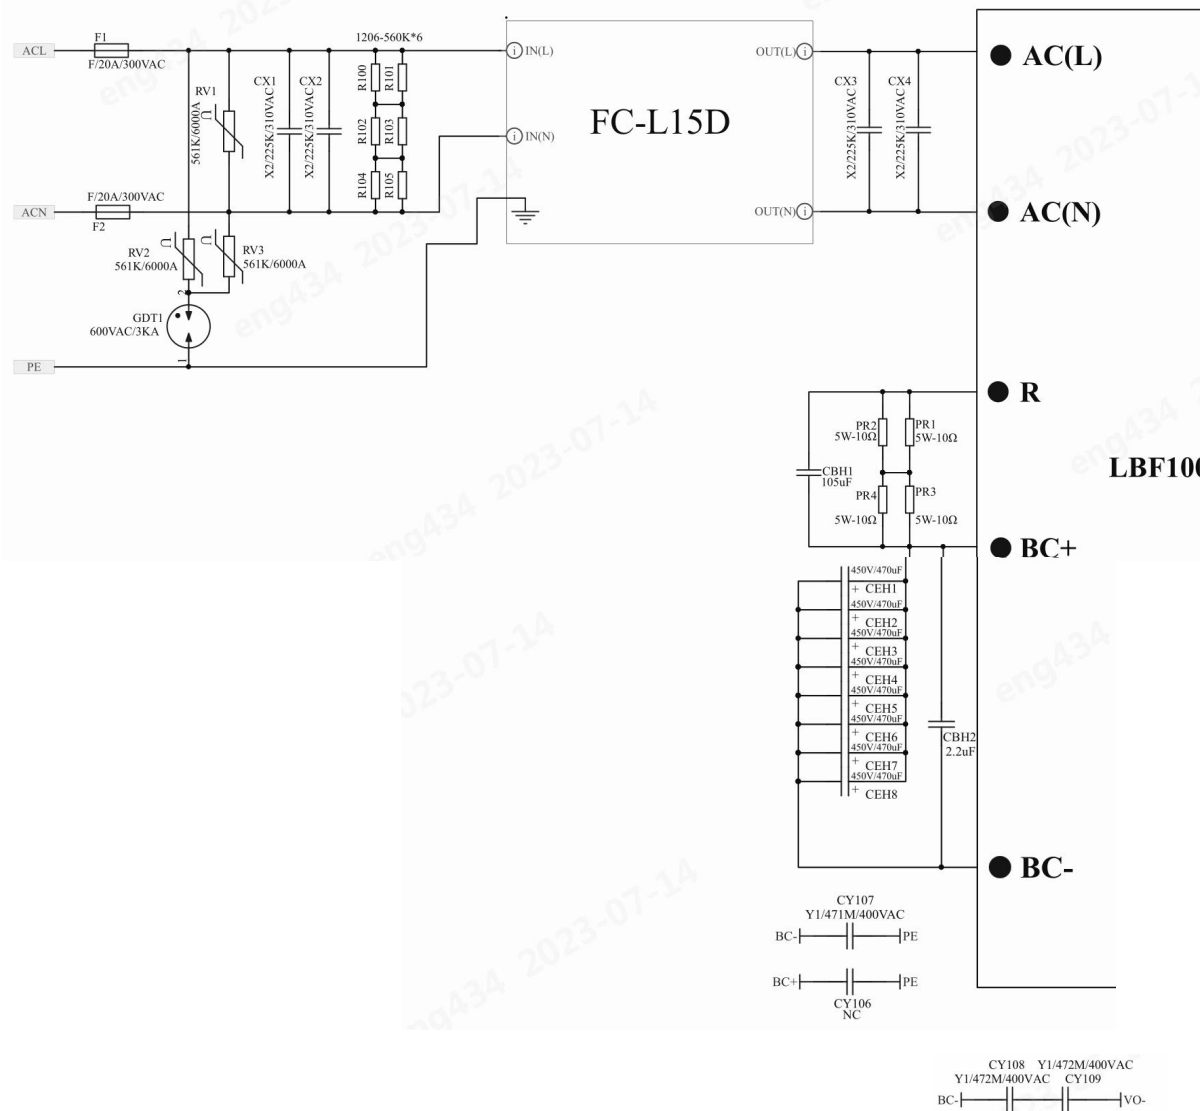

Recommended External Circuit

Recommended External Circuit 1

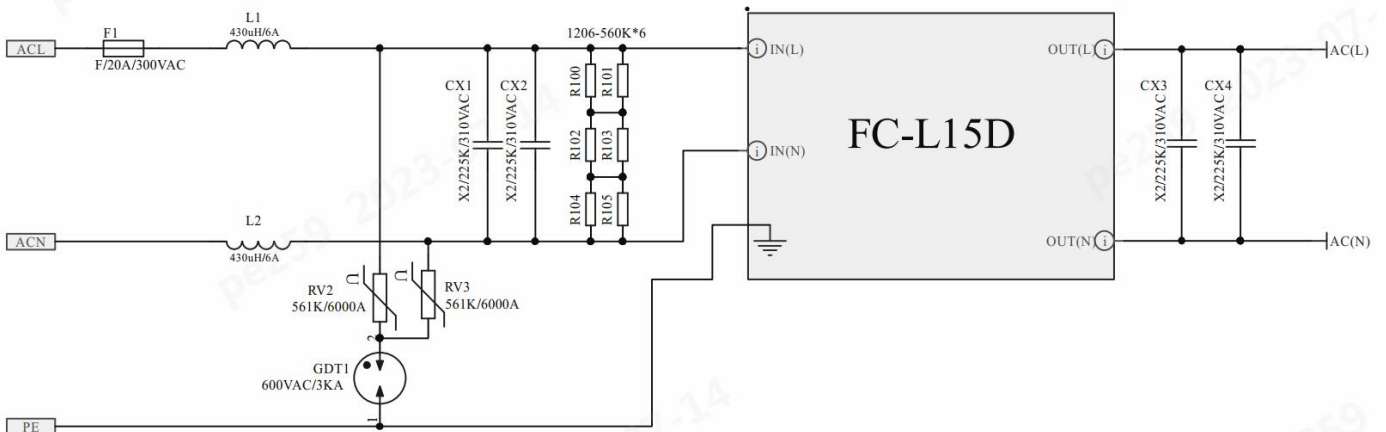

Note: The breakdown chart is as follows.

Component type	Recommended value	Brand
F1	300VAC/25A	Time-Delay-Fuse Betterfuse
RV2/RV3	14D561K/6000A	WMEC Electronic
CX1/CX2/CX3/CX4	X2/225K/310VAC	NISTRONICS
R100/R101/R102/R103/R104/R105	560K/1206	FENGHUA
FC-L15D	FC-L15D	MORNSUN
GDT1	600V/5KA	Bencent
GDT5/GDT8	300V/1KA	XIANGS
CBH1	105K/630VDC	NISTRONICS
CBH2	225K/630VDC	
CEH1/CEH2/CEH3/CEH4/CEH5/CEH6 CEH7/CEH8/CEH9/CEH10	150uF/450V (electrolytic capacitor)	MAN YUE ELECTRONICS
CEH1/CEH2/CEH3/CEH4/CEH5/CEH6 CEH7/CEH8	470uF/35V (electrolytic capacitor)	
CEO1/CEO2/CEO3/CEO4/CEO5/CEO6 CEO7/CEO8/CEO9/CEO10	680uF/35V(electrolytic capacitor)	
CY107	Y2/471K/250VAC	WMEC Electronic
CY108/CY109/CY110/CY111	Y2/472M/250VAC	
RS1/RS2	1mΩ /2W/2512	FENGHUA
LO1	0.4uH/1.2mΩ /80A	HAIHONGSHENG
CBO1/CBO2/CBO3/CBO4/CBO5/CBO6/ CBO7	475K/100V/1210	SAMWHA

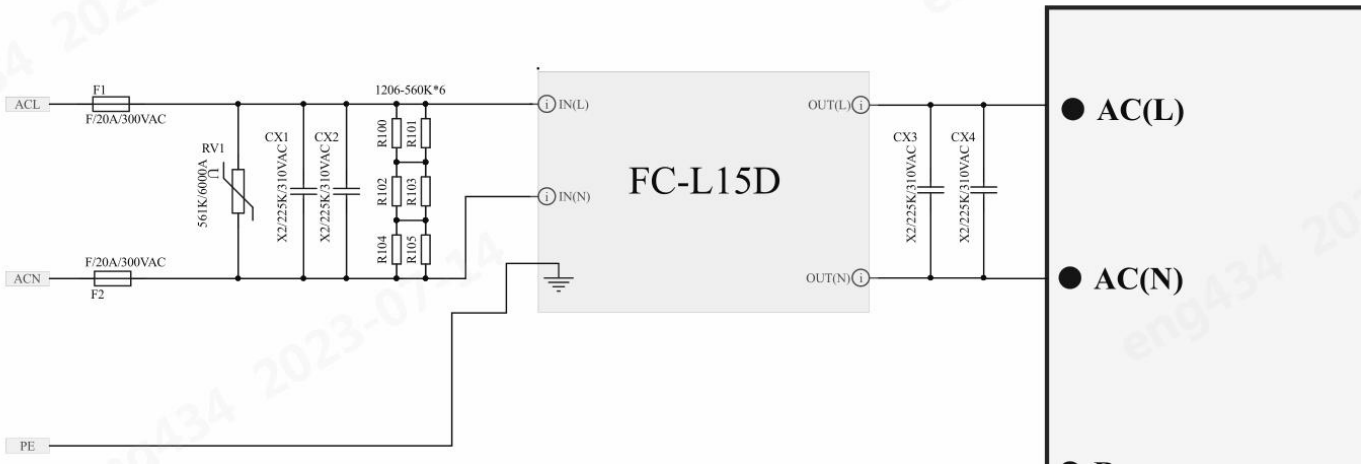

Note: 1. The no-load ripple voltage of the product will slightly exceed the specification (150mV) after switching from load to no-load, which can be improved by connecting a dummy load (resistance value $\leq 1.4K\Omega$) in parallel with the external circuit.
2. If there is a strict requirements on the output ripple voltage rms value, the single capacity of CEH1-CEH8 electrolytic capacitor should be increased to at least 470 uF (For routine use of CEH1-CEH10, use 150uF).

Recommended External Circuit 2

L1/L2	FD2D -60-431
<p>Note: 1. The rest of devices are same as above recommended external circuit 1. 2. L1 and L2 have been added to meet the conduction disturbance performance of low frequency conduction in the range of 9KHz -10MHz.</p>	

Note: Customer can choose MORNSUN filter module FC-L15D and FD2D-60-431 to replace the part of EMC circuit in the Recommended External Circuit, For more details, please consult the MORNSUN FAE.

Recommended External Circuit 3

Note: 1.The rest of devices are same as above recommended external circuit 1.
2.Gas is removed from this circuit, and the discharge tube GDT1 is used to meet the needs of isolated voltage resistance.

General tolerances: $\pm 0.50[\pm 0.020]$

Note:

1. For additional information on Product Packaging please refer to www.mornsun-power.com. Packaging bag number: 58210313;
2. Unless otherwise specified, parameters in this datasheet were measured under the conditions of $T_a=25^{\circ}\text{C}$, humidity<75%RH with nominal input voltage and rated output load;
3. All index testing methods in this datasheet are based on our company corporate standards;
4. In order to improve the efficiency, there will be audible noise generated when work at light load, but it does not affect product performance and reliability;
5. We can provide product customization service, please contact our technicians directly for specific information;
6. Products are related to laws and regulations: see "Features" and "EMC";
7. The out case needs to be connected to PE (\perp) of system when the terminal equipment in operating;
8. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units;
9. The power supply is considered a component which will be installed into a terminal equipment. All EMC tests should be confirmed with the final equipment. Please consult our FAE for EMC test operation instructions.

Figure1: Appearance Pin

Appearance Pin (Port) Definition:

1	Input N line	-S	-Remote sensing terminal
2	Input L line	+S	+Remote sensing terminal
3	External inrush current limiting resistor terminal (R)	PC	Output current balance terminal
4	+Boosted voltage terminal (+BC)	TRIM	Output voltage trimming terminal
5	-Boosted voltage terminal (-BC)	+ON/OFF	+ON/OFF control terminal
6, 7, 8	+Output voltage (+Vo)	-ON/OFF	-ON/OFF control terminal
9, 10, 11	-Output voltage (-Vo)	IOG	Output status indicating terminal
COM	Common ground terminal	ENA	Power on signal terminal
AUX	Auxiliary power supply terminal for external circuits		

2. Instructions for use

2.1 Input requirements

The AC input voltage and DC input voltage must be within the defined voltage range (refer to datasheet), otherwise the power supply may not work properly or even malfunction. There is no fuse inside the power module. For better protection, it is recommended that customers use a circuit breaker not greater than 20A.

To ensure the reliability of the product, hot plugging is prohibited.

2.2 Output requirements

At any voltage value, the maximum output current and power must not exceed the rated value.

2.3 Remote compensation (+S, -S terminals)

As shown in Figure 2, the +S and -S terminals are respectively connected to the load terminal (VOUT+ and VOUT-) through twisted-pair signal cables or differential signal cables (+S and -S) to compensate the line voltage drop between the module and the load. If the remote compensation connection is not required, the +S and -S terminals can be floating.

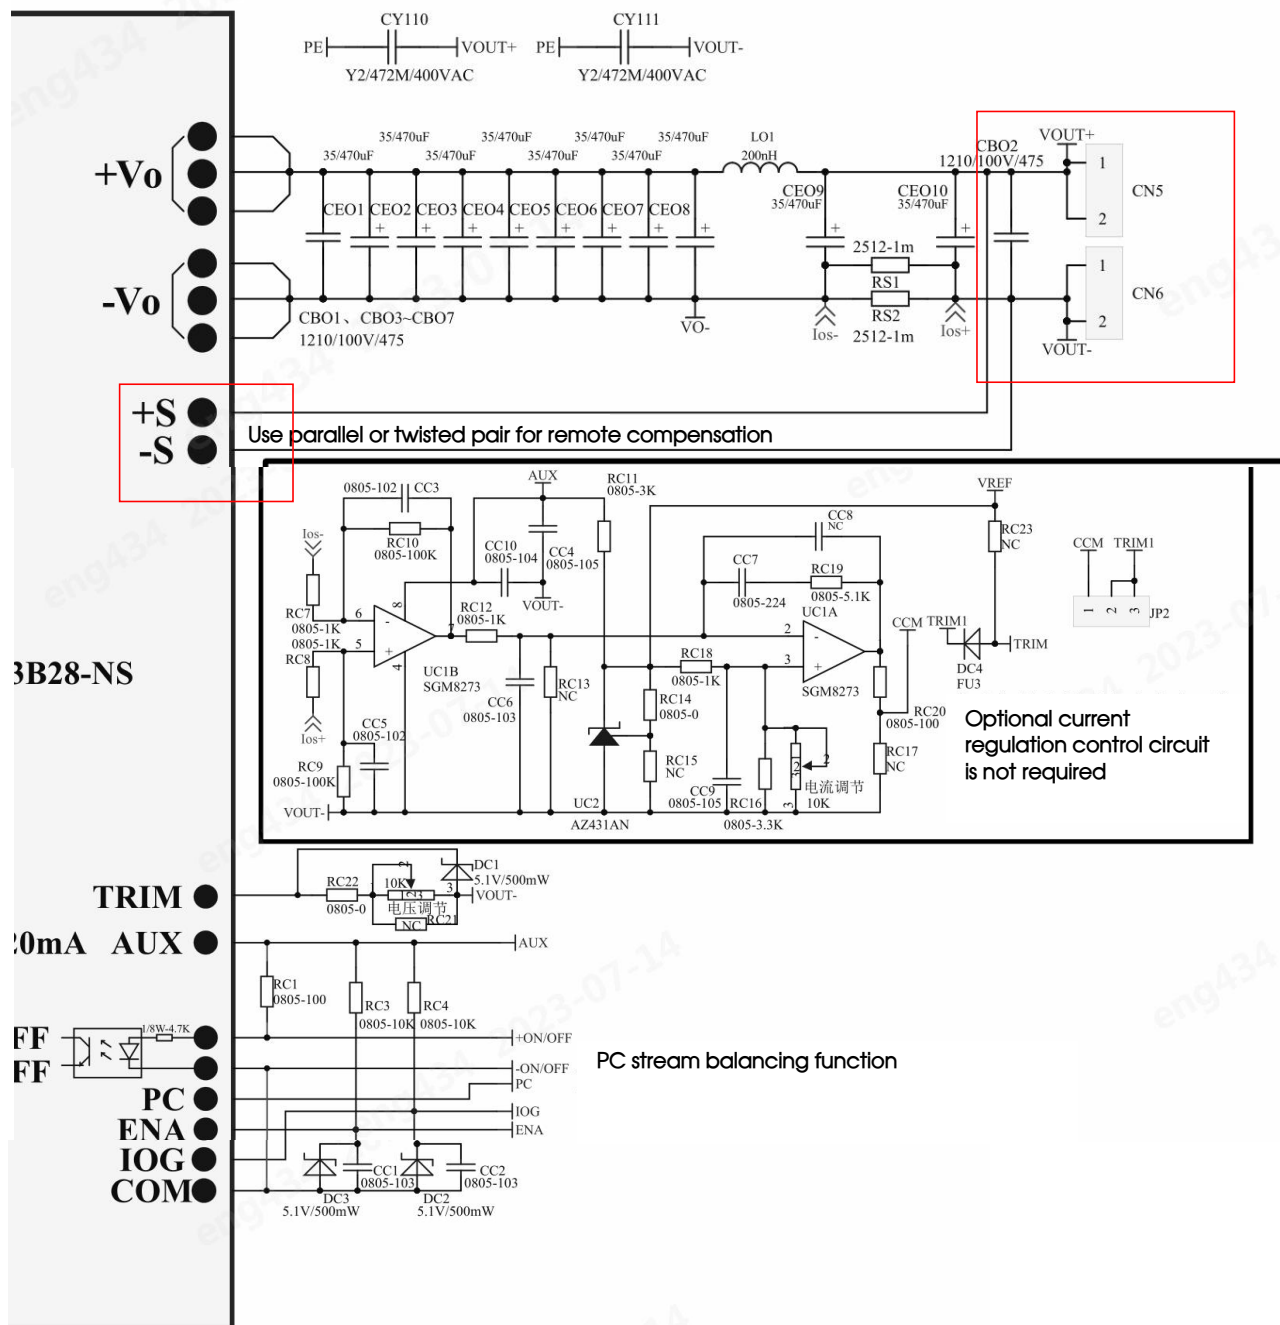

Figure 2: Schematic diagram of the remote compensation connection

Note: In the case of parallel machines or hot and cold backup, the remote compensation function cannot be used, otherwise the voltage anti backflow function will fail, and there may even be a risk of damage to the product.

2.4 Output voltage adjustment (TRIM terminal)

As shown in the wiring diagram in the red box in Figure 3, the output voltage of the module can be adjusted voltage from 14V to 33.6V by connecting the external 10K adjustable resistor with TRIM and VOUT terminals. When the output voltage is higher than the adjustable range, it may cause output over-voltage protection. When the output voltage increases, reduce the output current to ensure that the maximum output power of the module stays within the specified range. When the output voltage is lowered, the maximum output current remains unchanged.

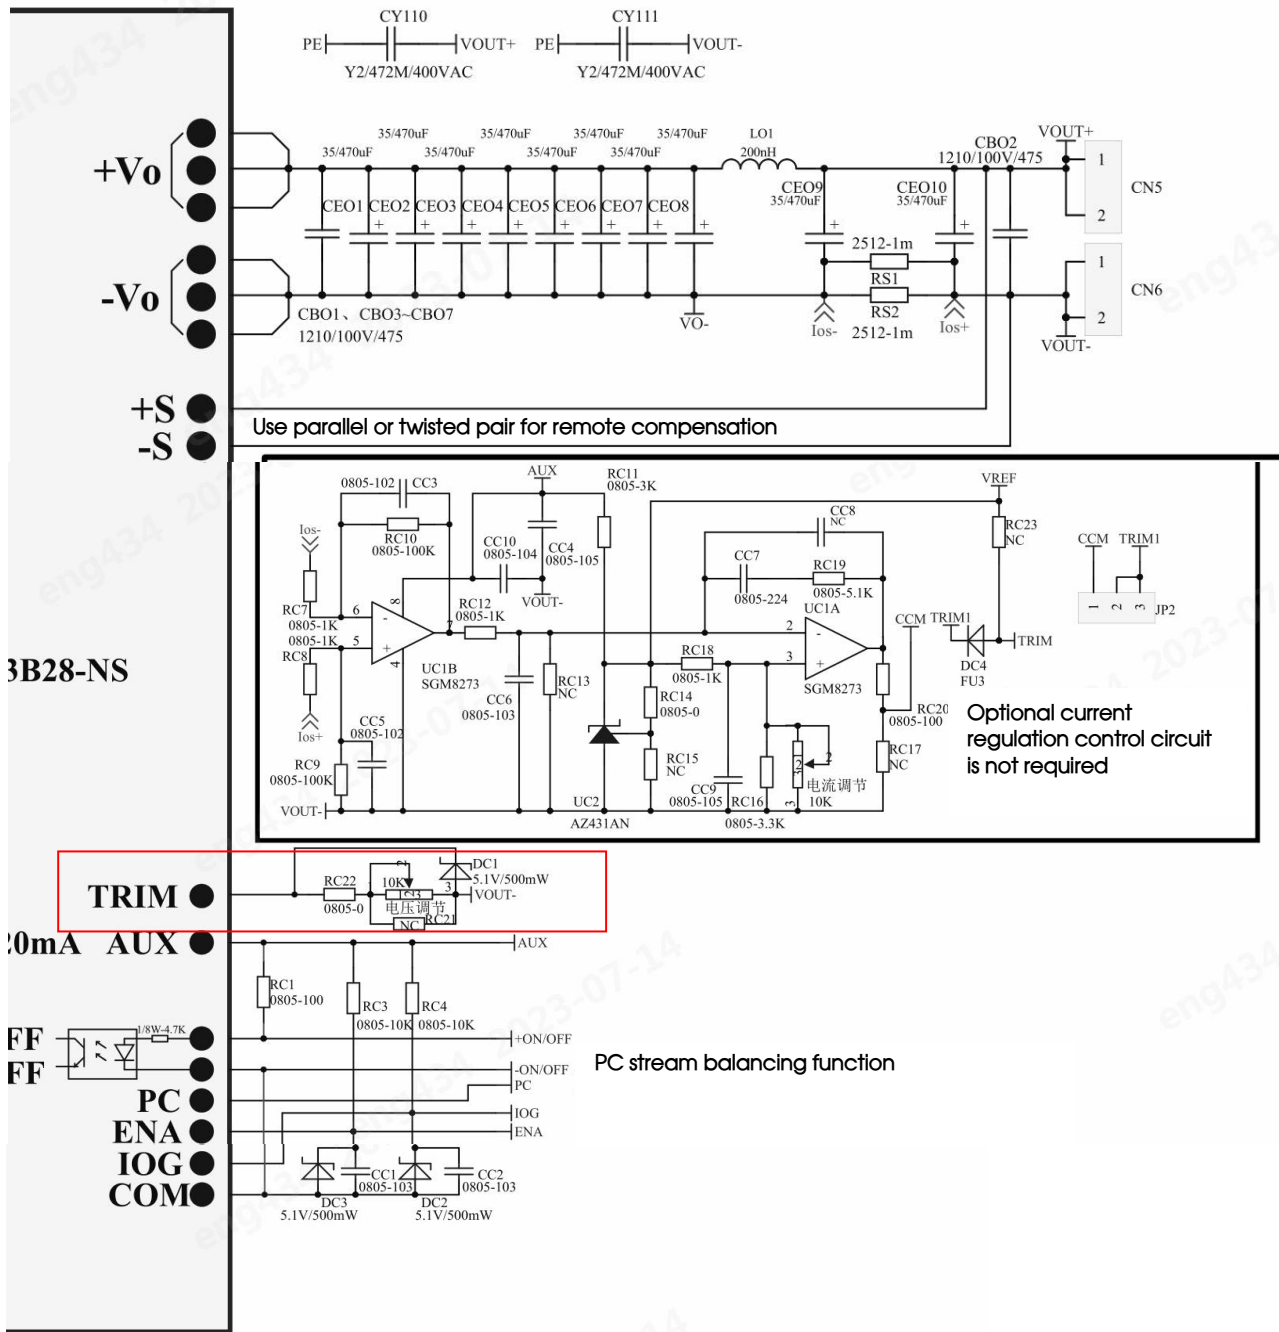

Figure 3: Schematic diagram of the output voltage regulation connection

2.5 Remote control switch (ON/OFF terminal)

The product with built-in remote control switch function. This function enables switching of the output to be controlled while the input voltage on. As shown in Figure 4, the remote control function shielding connection diagram, the ON/OFF signal terminal of this product with built-in isolation optocoupler in the power supply. If this function is not used, the customer can supply power to the +ON/OFF terminal via the AUX terminal through the current limiting resistor RC1. - The ON/OFF terminal is connected to the COM pin;

if you need to use the ON/OFF function to achieve electrical isolation control, you can refer to the schematic diagram of the remote switch connection in Figure 5, and use the ON/OFF control signal isolated from the power supply to provide power supply connections for the ON/OFF terminal (The control signal cannot be reversed).

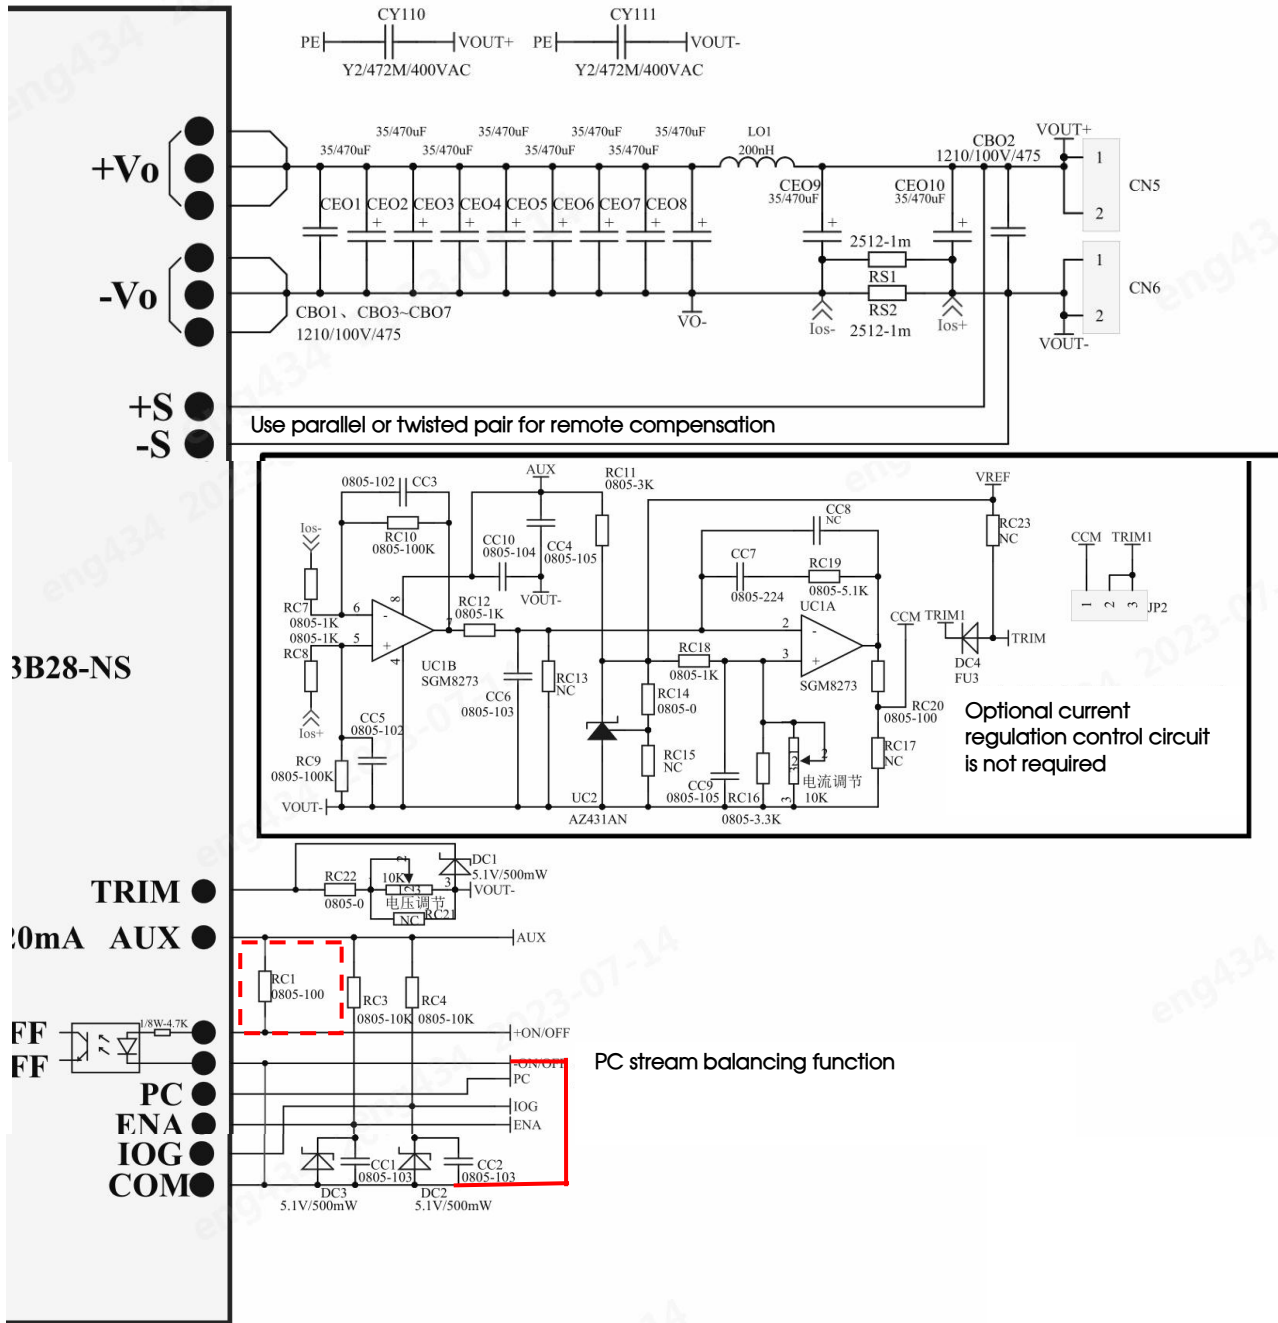

Figure 4: Remote function shielding connection diagram

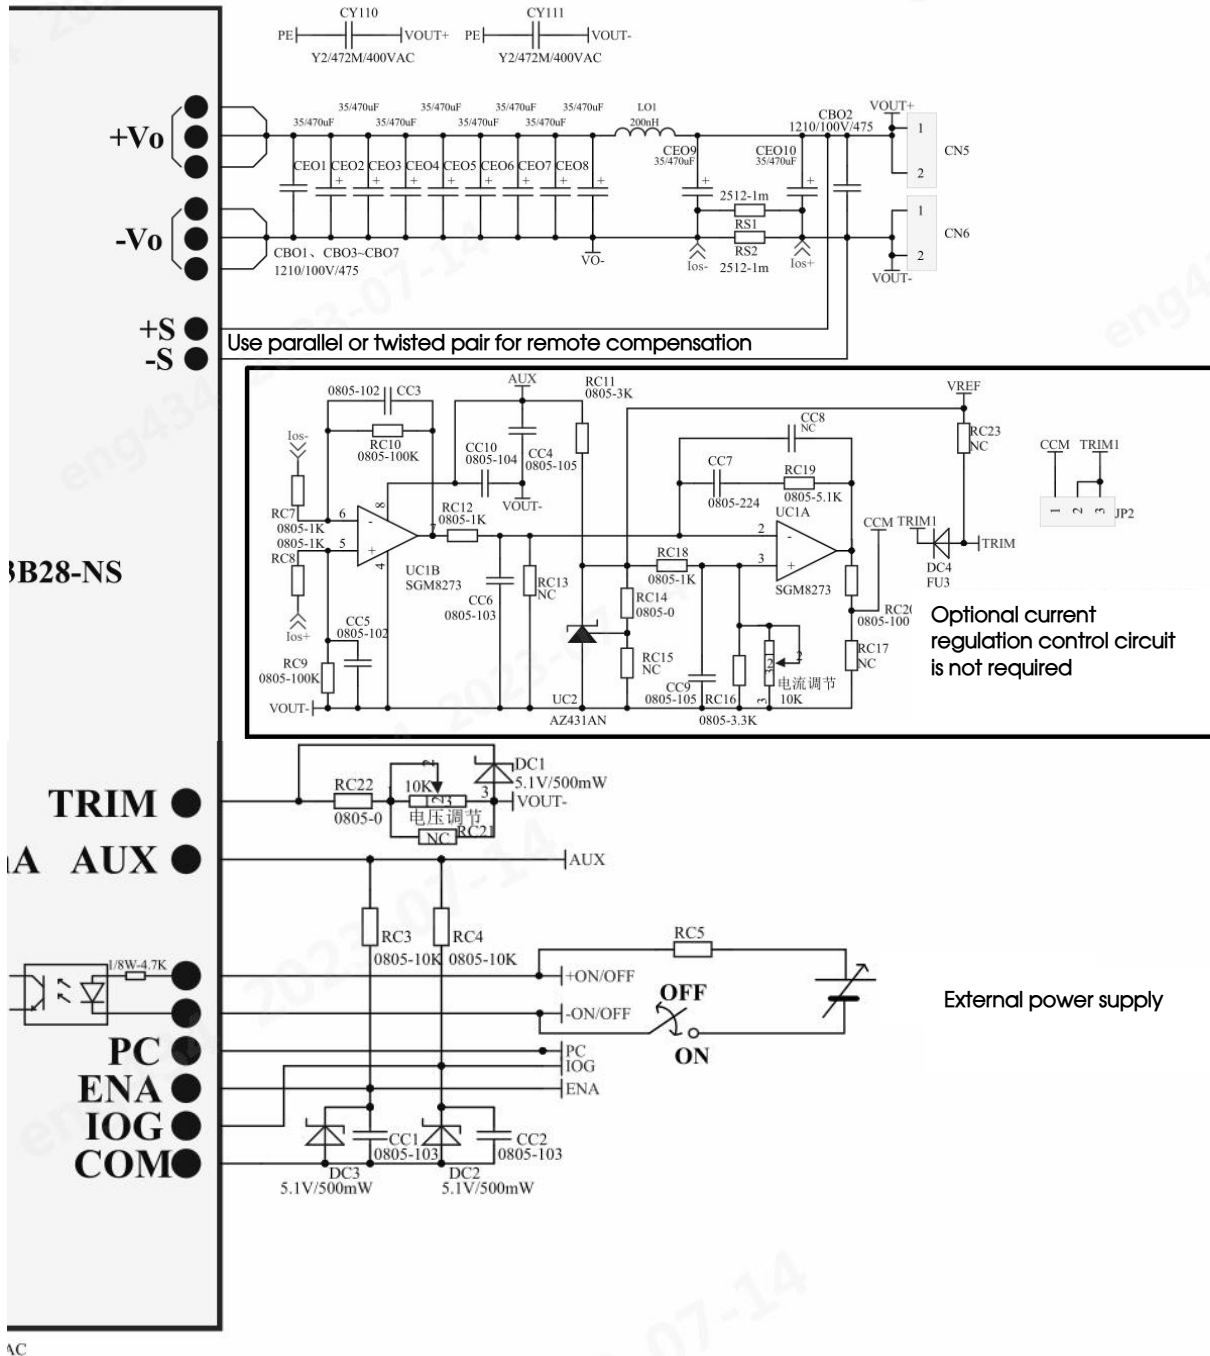

Figure 5: Schematic diagram of remote switch connection

Select the external voltage and external resistance, as the ON/OFF terminals current is shown below.

Table 1 Recommended ON/OFF terminal current

ON/OFF terminal current	Output Voltage
2-10mA	ON
<0.15mA	OFF

2.6 Parallel operation (PC terminal)

The PC terminal is a parallel current sharing bus. Parallel-connect the PC and COM terminals of each power module to equalize the output current between modules. At the output end of the power supply, the output cable width and length of each module should be as consistent as possible, and the line impedance should be as similar as possible. After the output filtering of a single module, a load bus is drawn from the load end. After the output filtering, each module accesses the load bus nearby through the load line of the same specification and length, and themobility is optimal.

Power modules support 2-6 parallel redundancy. Set the accuracy of the output voltage within $\pm 2\%$ precision when adjust the output voltage for parallel operation.

When the system is used in parallel, the maximum load current cannot exceed the maximum output current of a single power module; otherwise, the entire parallel power system cannot start properly.

Table 2 Condition for parallel operation

Parallel units	Maximum output current
2-3 units	90% of nominal output current
4-6 units	85% of nominal output current

2.7 Auxiliary power supply for external signals (AUX terminal)

The AUX terminal output voltage ranges from DC9.5V to DC14V, The AUX terminal keep current constant and reduce voltage when the output current is over 20mA. AUX terminal reference position COM terminal. Do not short-circuit the AUX terminal to a terminal other than the ON/OFF terminal. Otherwise, the power module may be damaged.

2.8 Status indicator (IOG terminal)

This signal is located at the secondary output side and is an open drain output. the reference ground is the COM terminal. By monitoring the signal from IOG terminal to COM terminal, you can check whether the power module is working properly. Low level when working normally, high level when working abnormally.

Note: Normal output is "low", when a fault occurs, the output is "high" (maximum pull-down current is 5mA, maximum applied voltage is 35V).

2.9 Power ON signal (ENA terminal)

This signal is located at the secondary output side and is an open drain output. the reference ground is the COM terminal. When output voltage goes over Typ. Output voltage threshold level 12V at start up, Power ON signal is "low level". "high level" when working abnormally.

Note: Normal output is "low", when a fault occurs, the output is "high" (maximum pull-down current is 5mA, maximum applied voltage is 35V).

2.10 Input under-voltage protection (UVP)

When the input voltage is lower than the under-voltage protection set value, the module output is closed; When the input voltage is higher than the under-voltage protection power-on set value, the module output is normal. The under-voltage protection has a return difference, that is, the shutdown setting value is lower than the start-up setting value, so as to prevent the module from being affected by external interference or the transient drop of input voltage when starting itself and working normally.

2.11 Output over-voltage protection (OVP)

When the output end of the module is over-voltage, the output voltage hiccup or clamped at a fixed value. After the fault is rectified, the module output automatically recovers to normal.

2.12 Over-current circuit protection (OCP)

This module is designed with over-current/short circuit protection circuit, which can withstand over-current or short circuit at the output end. After the over-current and short circuit faults are eliminated, the module output automatically recovers to normal.

When the output voltage setting value less than 25V, Typ. constant current value is 45A; When the

output voltage setting value between 25V-34.1V, Typ. constant current value decreasing as the output voltage setting value increases, the relationship diagram is shown in Figure 5.

Figure 5: the relationship diagram between output voltage setting value and Typ. constant current value.

When the output voltage setting value less than 17V, OCP mode is hiccup mode Typ. 1s at work, 4s at rest; When the output voltage setting value more than 19V, OCP mode is Constant current mode; When the output voltage setting value between 17V and 19V, both states may exist.

Note: that continuous short circuit or overload condition, might result in power module damage.

2.13 Over-temperature protection (OTP)

The built-in over-temperature protection circuit of the module prevents the module from being damaged due to excessive temperature rise such as overload and short circuit. When the temperature of the module shell exceeds the set value of over-temperature protection, the output of the module automatically closes. You need to power off and reset to restore the system.

Figure 6: AL-Substrate temperature test point

3. Test waveform

3.1 Startup and shutdown

Test conditions: Tc=25°C, LBF1000-13B28-NS products are tested based on recommended circuit 1,

CEH1-CEH10=1500uF.

Vin=115VAC Full load start (start delay 732ms)

Vin=230VAC Full load start (start delay 657ms)

Vin=115VAC Full load shutdown (46ms)

Vin=230VAC Full load shutdown (46ms)

Note: The power OFF hold-up time is related to the CEH capacitance, and can be adjusted with reference to the following formula:

$$t = \frac{0.5 \cdot C_{EH} \cdot (U_1^2 - U_2^2)}{P_o}$$

U1=410VDC, U2=325VDC, Po=1008W (based on actual power output).

3.2 Dynamic response

Test conditions: $T_c=25^{\circ}\text{C}$, current rate slope 0.1A/us, LBF1000-13B28-NS products are tested based on recommended circuit 1.

$V_{in}=115\text{VAC}$ 10%-100% dynamic

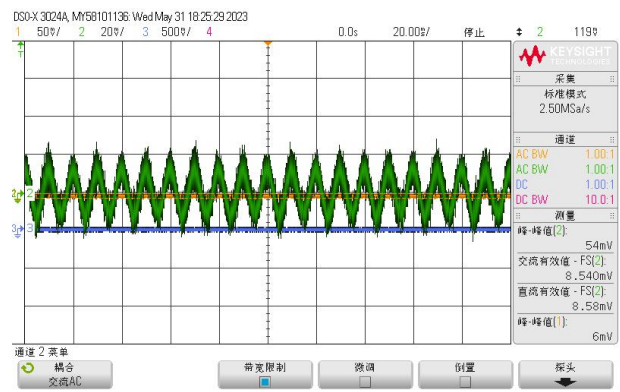

$V_{in}=230\text{VAC}$ 10%-100% dynamic

3.3 Output ripple and noise

Test conditions: $T_c=25^{\circ}\text{C}$, 20M bandwidth (peak to peak value) LBF1000-13B28-NS products are tested based on recommended circuit 4.

$V_{in}=115\text{VAC}$ full load ripple noise (53mV)/ripple RMS value (8.5mV)

$V_{in}=230\text{VAC}$ full load ripple noise (54mV)/ripple RMS value (8.5mV)

3.4 Conductive and radiation

(1) Radiation (RE)

4. Appearance specifications

4.1 Manufacturing data/dimensions

Length: 160.00mm±0.5mm

Width: 100.00mm±0.5mm

Height: 13.40mm±0.5mm

Terminal length: 5.0mm±0.5mm

Weight: 530g±30g

THIRD ANGLE PROJECTION 

Figure 7: Manufacturing data/size diagram

4.2 Installation and disassembly methods

Installation method: Place the heat sink on the aluminum base plate and fasten the heat sink to the product using four screws.

Removing method: Use a tool to separate the four screws from the heat sink.

Maximum mounting hole tightening torque: 0.4N.m.

4.3 Cooling method

Heat dissipation method	Surface heat sink	<input type="checkbox"/>
	Natural cooling	<input type="checkbox"/>
	Conduction heat dissipation	<input checked="" type="checkbox"/>
